

SKU: CCA-ELEG01

ELECTRIC STABILIZER LEG

A REMOTE CONTROL RV ELECTRIC, WATERPROOF STABILIZER JACKS WITH 2.4T LOAD CAPACITY

BENEFITS

With the Dual Control System, you can enhance the stability of your RV, allowing for both group and individual control of each support leg. This system boasts a 20% increase in width and stronger anti-sag capabilities compared to previous models. The one-button remote control enables automatic lifting and stopping, ensuring precise operation.

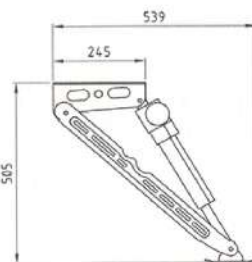

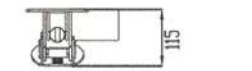

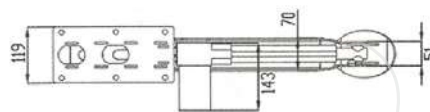

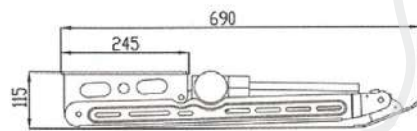

With a load-bearing capacity of 2.4 tons and 600 kilograms per leg, it effectively minimizes shaking and reduces tire load. The waterproof motor is rated IP66, while the thickened support plate prevents sinking, making it a reliable upgrade for your travels. Its compact design integrates seamlessly into your RV, combining practicality with style.
